

EK's Tri-Chem Pack Boon to Snapshot Fans

Life is going to be easier for photo fans everywhere. They're going to save money, too, since no longer will they have to mix more developer, short stop, or fixer than they need for the work which they have at hand.

Handy Pack—Kodak Tri-Chem Packs are supplied to dealers in cartons of 50, as shown. Carton also makes excellent counter display.

A new package of photographic chemicals is the answer. It provides in one inexpensive unit all the materials necessary to prepare all the developer, short stop, and fixing bath required to develop and fix two rolls of 620 film or 50 prints from 2 1/4 x 3 1/4-inch negatives or equivalent.

20 Cents a Pack

The new unit is known as the Kodak Tri-Chem Pack. Each pack, priced at only 20 cents, contains heat-sealed aluminum foil packets of chemicals to make 8 ounces of Kodak Universal M-Q Developer, 8 ounces of Kodak Universal Stop Bath with indicator, and a similar amount of Kodak Universal Fixer.

The new pack eliminates the need for many storage bottles in kitchen or darkroom. Photographers also can be certain that they always are using fresh chemicals at full strength. The packets of chemicals in the new unit will remain fresh without deterioration for an unlimited period.

The new packets are practically mistake-proof. Full directions are included, but all that is necessary is to tear the corner from a packet, mix with the specified amount of water, and the solution is ready for immediate use.

His Idea Sets New Record For Kodakers

Silver and Gold—Bernard H. Holman of the Paper Mill at Kodak Park struck it rich when he suggested a change in the silver recovery process. He received a \$2500 award.

KP Man Gets \$2500, Tops for Individual

Highest initial award for an individual is represented in a check for \$2500 that goes to Bernard H. Holman of the Paper Mill at Kodak Park for his suggestion approved in the fourth period.

Holman's suggestion award—an all-time record since inception of the Suggestion System—comes in the 50th anniversary year.

He receives the award for proposing a change in the solution used in the electroplating silver recovery process in the Paper Mill. This has resulted in an increase in the amount of silver recovered from scrap sensitized paper.

The Park man hit the jackpot on his 43rd approved suggestion. Previously his top mark was \$200, received in 1938. Holman joined the Park in 1929 and was in electrical construction and F.D. 7 before joining the Paper Mill in 1932.

One other initial \$2500 award was made at Kodak in 1947, but it was shared by two men. They are Frederick Greenfield and Leo Braun, who pooled their ideas and made a joint suggestion on production of the proximity fuse at NOD. The previous high initial award to an individual was \$2000 which was earned by each of two Park members—Elizabeth Freeh and Gerald A. Bentley.

Flyer Killed In Sea Crash

Wellington H. Potter, formerly of the Roll Coating Dept. at Kodak Park, was killed last week in a Navy plane crash off Honolulu.

Potter, who was serving as an enlisted aviation radio specialist, had been stationed in Hawaii for more than a year.

The Navy reported that the plane, which was towing a sleeve target, apparently stalled in a turn at about 800 feet altitude and crashed offshore.

Potter left Kodak Park to enlist in the Navy in May 1941. He had an adventurous career during World War II. While serving as an aerial radioman in 1942, his plane crashed in the Pacific but he escaped with a broken tooth.

"Buzz," as he was known to his Navy pals, won the Presidential Unit Citation, Air Medal and special commendation from the Commander in Chief of the U.S. Atlantic Fleet. While on duty in the Atlantic as a radioman and photographer he sighted a "wounded" U-boat. After centering his instruments for the pilot's attack, he turned to his camera and made dramatic pictures of the kill.

Potter leaves his wife and a 9-month-old son.

Chest Campaign Ends Monday

Campaigners for the Community Chest were busy today making their final contacts at Kodak divisions in an effort to get in all contributions before the weekend. The campaign ends Monday night.

The Kodak groups are part of the volunteer committees seeking to reach a goal of \$2,053,135 for the Chest's 47 Red Feather services. Goal of the Industrial Div. alone is \$510,000.

Leaders of the campaign stressed that subscriptions must be boosted to meet the goal. They cited the greatly increased demand and higher costs of services being rendered by the agencies sharing in the funds.

EK Products at Work

Kitchen Canister Sets to Pop Bottle Caps — Photography Plays Big Part in Daily Lives

That can of beer on your grocer's shelf . . . the cap on that bottle of Coca-Cola in the refrigerator . . . the decorated flour, sugar and coffee canisters in the kitchen . . . those bright metal toys in the ten-cent store—these and thousands of other similar things are products of the art of metal printing.

And metal printing is another of the many applications of photography with which we come in contact in our daily lives.

Many photographic reproduction materials that Kodak makes for the graphic arts field are put to extensive use in metal decorating

—the Kodalith line of films and plates, Kodak Panchromatic Plates, Tri-X Panchromatic Plates—just to name a few.

Generally, these products are associated with the paper printing trades, but printing by no means is confined to paper, nor is photo-

engraving. Just as graphic arts is one branch of photography, metal decorating is just one of many fields served by graphic arts.

Printing plates are made for this process just as if they were to be used for a newspaper or magazine. Printed copy or art work of all kinds—both in black and white and color—is used, from which metal plates are made photographically. This thin plate is wrapped around a cylinder of an offset press and is ready to run.

Prints on Flat Sheet

This covers the photographic aspect of the process, but gets a bit ahead of the story. Those who may have had an idea that the printing is done on a can in its cylindrical shape are wrong. The printing is done before the can has been formed . . . while it's still flat sheet.

Normally, sheets of tin-coated metal, 31 1/2 by 36 inches in size, are used. Some presses, however, are capable of taking sheets 45 by 54 inches. The thickness is from 18 to 38 gauge.

The metal sheets are first coated with enamel in the desired background color. The coating is done by rollers of a gelatinous composition of glue and glycerine—very soft and pliable—which spreads the enamel on smoothly and evenly. The coating machine feeds the sheets directly into a gas-fired drying oven 100 feet long. For 90 feet, they are subjected to heat of 300

Set to Ship—These Kodalith and Kodak Panchromatic Plates are packed ready for shipment from the Plate Dept., Bldg. 36, Kodak Park. They'll be used for a wide variety of things in the graphic arts field, including metal decorating. Maneuvering this skid of plates into position are Oscar H. Stoik, left, and W. A. Twentymon.

8 to Address Coast Parley

Eight Kodakers are listed on the program of speakers for the 63rd semi-annual convention of the Society of Motion Picture Engineers. The week-long meeting opens Monday in the Ambassador Hotel in Santa Monica, Calif.

Forrest Richey, KP Research Lab, will read "Principles and Practice of Three-Color Subtractive Photography," a paper written by Richey and Wesley Hanson, Research Lab.

Tom Miller, KO Photographic Training Dept., will use 73 color slides to show why masking in color reproduction is advantageous.

Two members of the Hollywood Office of the Motion Picture Films Dept., R. G. Hufford and Norwood Simmons, together with RCA's R. V. McKie, will address the convention on "Specifications for Variable-Area Sound Track on 16-mm. Kodachrome."

Charles Fordyce, KP Mfg. Experiments, will discuss "An Improved Safety Motion Picture Film Support." Alfred Robertson, of the same department, will talk on "Film Standards, Film Dimensions and Film Behaviour."

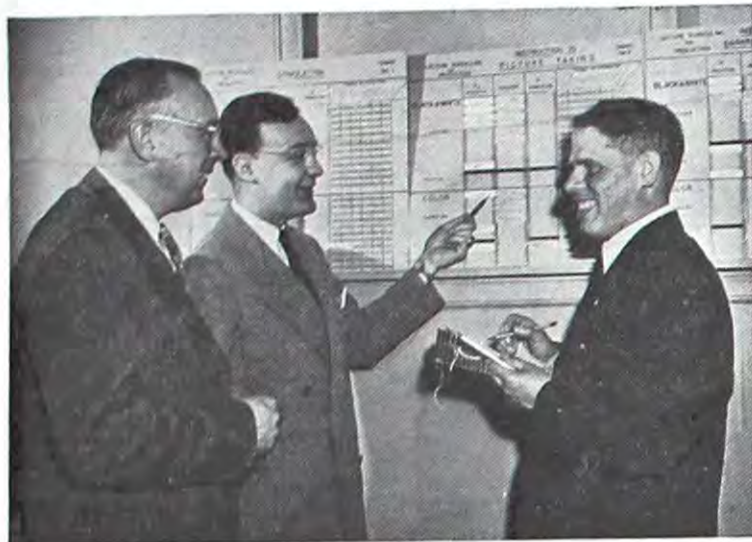

Symposium Leader

Ralph Evans, KP Color Control, who heads the symposium on color, also will speak on "Seeing Light and Color." Walter Grimwood, KP Color Control, will give a paper on "Volume Compressors for Sound Recording."

Also from Rochester will be Robert Corbin, KO Motion Picture Films Dept., of the Society's board of governors; Gordon Chambers, same department, who heads the Society's paper committee; John Capstaff, KP Research Lab; Carl Overhage, KP Color Control. Don Spring, Canadian Kodak's motion picture contact man, and Donald Hyndman, New York Office of the Motion Picture Films Dept., also will attend the sessions.

(Continued on Page 4)

Pin-Point Photography Revealed as Aid to Allies

Lecture Scheduling—Olav Tjonneland, right, takes notes on methods of scheduling and producing photographic lectures. Teachers are Adrian TerLouw, head of KO Camera Club and School Service, and Norm Salmons, also of CC&SS. Tjonneland, who is from Norway, says camera clubs are spreading rapidly in his country.

Photography provided the Norwegian underground with a vital form of communication with the Allies during the war, says Olav Tjonneland, KO visitor. He had charge of the underground's photographic communication section in World War II.

Sheets of valuable information, each reduced by photography to the size of a dot, were concealed in watches and pockets and smuggled in and out of Norway. First photographed on 35-mm. film, further reduction was accomplished by photographing through a microscope.

Trick Cartons

Rolls of 35-mm. and smaller films, exposed but undeveloped, also were used by the underground. These were so packed that the film was ruined unless one knew the trick of opening the cartons. As the Nazis didn't have the trick, the rolls which fell into their hands were useless to them.

Much of the planning for the destruction of the Nazi-operated Rjukan plant just as it began to produce heavy water for atomic experimentation was done by photographic communication between England and Oslo, Olav added.

The lengthy mountainous border of Sweden and Norway was responsible for much of the success of photographic communication. The Nazis couldn't patrol that distance effectively, and photo supplies, even to chemicals in bottles, were brought in on packs on skiers' backs. Dot messages and rolls of film were carried over the border to Sweden and flown from there to England.

Tortured Teacher

It wasn't easy though, the Norwegian continued. Lauritz Sand, who taught Olav the methods of underground photographic communication, was captured by the Nazis soon after the occupation. When he was released, X-rays revealed 68 breaks in his body, Olav declared. The Germans had tortured him to get his secrets, but he told none.

Young boys were used to deliver messages from the underground's photo labs, until the Nazis caught on. Then girls took over. No one ever knew his coworker's real name, and if the Nazis caught a member of the underground, everyone connected with him changed his name.

Olav, a chemical engineer and a member of the Royal Norwegian Institute of Technology, is associated with J. L. Nerlien A/S, sole importer for Kodak products in Norway.

His prime interest here is to learn new color processes and how photography may be applied to industry, graphic arts and education. He's devoting much of his stay to KO's Camera Club and School Service, for camera clubs are flourishing and lecturers are in great demand in Norway.

Studies Show Sensitivity of Silver Grain

About 40 of the tiny particles of light known as quanta, which travel at about 186,000 miles a second, must strike a single photographic grain of silver bromide before it can be developed.

This conclusion concerning sensitivity of a silver grain to light is reported by Dr. Julian H. Webb on the basis of recent studies in Kodak Research Laboratories.

Dr. Webb explained that the total energy of the 40 quanta, when transmitted in the average photographic exposure time of 1/100 second, is about 2/1,000,000,000,000,000ths (quadrillionths) of a watt—an infinitesimal part of the energy required by an ordinary light bulb.

For his experiments Dr. Webb used special plates made by diluting a regular emulsion and spreading it on optically polished glass until the emulsion layer was only one grain thick.

He found the number of grains per square centimeter in these single-grain-layer plates by microscopic count, then exposed the plates to light of known energy.

Using the microscope again, further counts were made of the developed and undeveloped grains for successive steps in exposure. Information obtained was used to plot "characteristic curves" which show exposure and density or the number of developed grains.

Dr. Webb said further studies indicate that probably not more than 10 of the 40 quanta absorbed by each grain are actually used in formation of the minute silver speck which is believed to start photographic development.

Booklet Describes Projection Papers

New Kodagraph Projection Papers for use with enlargers, projection printers, or process cameras are described in a new booklet published by Kodak.

These papers, Kodagraph Fast Projection Paper and Kodagraph Projection Paper, are designed to provide highest quality prints from microfilm negatives or from engineering drawings or printed matter which requires additions, deletions, or changes in scale.

A second booklet, describing Kodagraph Contact Paper for contact photocopying and engineering reproduction, also has been issued in a revised edition.

Both booklets are available without charge from the EK Industrial Photographic Division.

Initial Session—Betty Donahoe, receptionist at the Sales Training Center, hands a name card to Salesman Bill Simmons. Bill and Salesmen Carl Horton, John Karl and George Weitzel were greeted by Howard Kalbfus, right, Sales Training Center director. The salesmen were among 14 out-of-Rochester Kodakers to serve as an experimental suggestion-offering group in the initial sales training class at the Center. They recently completed the initial 10-day session. Early in June, representatives of Kodak dealers will begin arriving for the course, primarily designed to train them in latest photographic selling practices and to familiarize them with Kodak equipment and materials.

Photo Patter

Key to Good Pictures? Make 'em Tell Stories Well

His Big Moment!—A simple, storytelling picture like this has lots of appeal because it shows a situation which everyone understands—the little fellow's delight at being aboard a real fire engine and wearing a fireman's helmet.

What makes a good picture good? Why is it that two shots of similar subjects, both in focus and exposed correctly, may be as far apart as the poles in arousing interest?

Let's answer it this way: Suppose someone's telling a story. If it's a good story you'll pay attention; if it's a poor one you won't. And even a good story can be murdered when it is told poorly. So, if the storyteller hopes to keep your interest, he first must have something well worth telling. Then he must tell it well.

The same is true of pictures. The pictures that have the widest appeal are those that tell a story—tell something about the people who are in them or which convey the feeling of a place or situation. These pictures must do this well. They must make clear at a moment's glance just what they try to convey.

Take a look at the picture which accompanies this article. Frankly, it isn't a great picture, but it does prove a point. It tells a story of a small boy's delight in finally getting aboard the shiny fire engine and wearing a real fireman's helmet to boot. Then there's the pleasure which the fireman obviously is getting out of the fact that he's been instrumental in bringing joy to a little lad's heart.

There are no distractions in the picture, and that's important. Notice that no attempt has been made to show the whole fire truck. It could have been included, but what would it have added? Not a thing. Enough of the truck is visible so that one immediately identifies it as a fire truck, so it tells the story.

The fact is that including the whole truck in the scene would have forced the photographer to move farther back from the boy. And he is the key figure.

Firm Packing Means Faster Repair Work

Improper packing of cameras and projectors returned to the factory for repairs may result in further damage, Kodak points out.

Cameras sent in for repair should be wrapped first in several thicknesses of soft paper to protect the lens and prevent dust from getting inside the camera or shutter mechanism. Cameras so wrapped then can be placed in a suitable large carton and protected on all sides by filling in the empty spaces with cut paper or other material.

It is recommended that projectors be sent in for repairs without carrying cases. Pedestal bases, such as those on the Kodascope EE Projector, can be removed. The rest of the unit then can be placed in a reasonably large carton, so that enough packing material can be inserted on all sides to protect the unit from the ordinary banging received in transit. The pedestal base on the Kodascope G Projector cannot be easily removed. Consequently, special care should be taken in inserting the packing underneath the casing. This will give some support to the mechanism and take unnecessary strain off the pedestal base. Packing in this way will prevent the standard from becoming broken.

The letter of instructions should be pasted securely or tied to the outside of the package to bring the letter and the package to the Company simultaneously and thus permit more prompt service. In addition to the postage for the package, a three-cent stamp should be attached to the envelope to cover first-class postage for the letter.

New Film Ready For Dental X-rays

A new, narrow Ultra-Speed Dental X-ray Film Packet has been announced by Kodak. Designated as Kodak Ultra-Speed Periapical Dental X-ray Film, No. 1 size (DF-55), the packet is especially designed for radiography of the anterior teeth.

Each packet contains two films. The speed of the emulsion makes the new packet practical for special techniques where short exposures are essential or for the longer target-film distances.

Available only in packages of 144 packets, the new film will be priced at \$5.25 per package.

IT'S IN THE PARK

Approximately 145 friends and associates of J. Fred Munger, E&M Planning Section, attended a retirement party at Hotel Rochester Apr. 22. A. R. Eckberg, E&M Division superintendent, and Alfred Walker, chief machine planner, made the gift presentation speeches. One of Fred's gifts was a bee helmet, the latter to be used in the pursuit of

A. R. Eckberg, right, E&M Division superintendent, presents gift to J. Fred Munger of the E&M Planning Section, at Munger's recent retirement party. At left is W. A. Hallett, assistant superintendent of E&M Planning.

raising bees on his farm near Wolcott, N.Y. Music at the affair was furnished by the Machine Shop "Philharmonic String Sextet." . . . A committee meeting of the Park's Troop 50 was held recently at the home of Byron Trussell, Bldg. 6. . . Nineteen girls attended the dinner party given at the Roosevelt recently for Lenora Page of the Industrial Engineering Dept. Lenora was married Apr. 17 to Robert Ade. . . Clayton Alt, Bldg. 26, assistant scoutmaster of Troop 50, will leave soon with Mrs. Alt on a motor trip to California. . . Members of the Time Office Women's Bowling League held their annual banquet at the Triton Apr. 22. . . "Seeing Light and Color" was the subject of a talk delivered last week before the Rochester Optometric Society by Ralph M. Evans, superintendent of the Color Control Dept.

R. S. Scott, second from left in foreground, superintendent of the Processing Dept., awards 25-year service medal to John Norton as Albert Jones, another quarter-century qualifier, beams his approval. Members of supervisory staff and others assembled for ceremony.

John Norton and Albert Jones of the Cine Processing Dept., both of whom observed their 25th service anniversaries with Kodak recently, were honored during an informal afternoon ceremony. R. S. Scott, department superintendent, presented them with Eastman medals. Also speaking briefly were H. A. Hartt, assistant superintendent, and Alfred Hargreave, Film Development Dept. foreman. . . Helen Haehle, Marge Sale, Larry Alman, Al Bakker, Dan Suter and George Gustaf successfully weathered the barrage of subtle questions hurled at them during a Whiz Quiz, one of the many features of the Industrial Engineering Dept.'s Spring Party which took place at DeMay's Apr. 23. . . Ralph Munro, F.D. 4, is thanking his many Park friends who remembered him during his recent illness in General Hospital. . . Howard Starkweather, Cellulose Acetate Development, and his wife, Winona, formerly of Kodacolor Paper Print, celebrated their 25th wedding anniversary Apr. 28. Friends and relatives tendered the pair a party at the Roxbury Inn, Brockport.

Good Luck, Elmer! — A farewell luncheon was given at the Service Dining Room for Elmer Andrews just before he left to become head of the KO Maintenance Dept. From left are L. E. Mross, R. P. Cook, Mrs. Andrews, Elmer Andrews, P. T. Elliott and L. D. Jackson. Andrews was in KP Engineering Dept.

Music Fills the Air of New Bldg. 28 From Modern Sound Control Studio

There's music in the air almost any hour of the day in Kodak Park's new cafeteria and recreation building where diners are now relaxing to the strains of the latest hits from Tin Pan Alley. No matter where you may happen to be, whether in the subbasement or up in the gymnasium, you are within range of a musical program.

Center of this extensive network is the sound control room, temporarily located in a small room on the fourth floor of the building. By the use of speakers built into acoustic ceilings and flexibly controlled so as to reach any or all parts of the building, a variety of wired services is made available. These include music by transcription, recorded music supplied by outside sources and a complete paging system.

The bulk of the new equipment needed to maintain the sound system consists of a control console containing the main line and pre-amplifiers, a control panel, a turntable for reproducing 16-inch transcriptions, and a modern AM and FM radio. Also there are six main power amplifiers to "drive" the many speakers located throughout the building. Remote pickups are made possible by the use of five portable microphones

'On the Air' — Arch Groth is shown at the "mike" in the sound control room in the new cafeteria and recreation building at KP. Music and announcements piped from this well-equipped studio reach all parts of the new building.

of the latest type, handled through a remote control panel.

While wired music thus far has been limited to certain times during the day for most areas of the building, it is heard in the first floor cafeteria at all hours. Occa-

sionally special programs are arranged for luncheon periods in the new service dining room. The permanent sound control studio will be located next to the theater stage planned for the half of the building not yet erected.

KP Folks Aid At 'Workshop'

Kodak Park was well represented at the 4-day workshop on office management sponsored jointly by the National Office Management Association and the Rochester Institute of Technology Apr. 26-29 at the Rochester Business Institute.

Among Park people taking part were Bob Casey and George Freeman of the Industrial Engineering Dept.; Ed Thane, E&M Stores, and Harold Peters, Wage Administration.

Ed Plant, Comptroller's Division, spoke on induction training and demonstrations of induction training aids were presented by Lorraine Struck and Corinne Sullivan, Comptroller's Division, and Win Gordon, Industrial Engineering of KP. L. E. Isaacson, KO Office Management Dept., formerly of the KP Time Office, discussed cost reduction.

The sessions were attended by 46 members, 27 of whom came from outside the city.

Ed Plant

Park Man Takes Position at KO

Elmer Andrews, a member of the Engineering Dept., Bldg. 23, since 1936, recently assumed the duties of head of the Maintenance Dept. and became plant engineer at Kodak Office.

Andy came to Kodak Park 21 years ago, starting as a chemist in the Industrial Laboratory and transferring to the Dept. of Manufacturing Experiments in 1930.

War II Veteran

At the outbreak of World War II he was called into the Ordnance Division of the Army as a first lieutenant and was loaned to the Navy to act as Officer in Charge of Maintenance of the Naval Photographic Laboratory at Anacostia, Md., the construction of which was designed and supervised by Kodak. Andy held this post until after the termination of hostilities, returning to the Engineering Dept. as engineer in charge of design and engineering in processing stations outside of Rochester.

Mr. and Mrs. Andrews were guests at a noon luncheon in the service dining room Apr. 29.

These Ideas Didn't Click

The following numbers represent the suggestions which were rejected in the third period at Kodak Park:

Photography—and Pop Bottle Caps

(Continued from Page 1)

degrees. Air cools them the last 10 feet. The combined drying and cooling process requires 15 minutes.

The enamel is no ordinary enamel. It is specially made for this type of work and possesses, among other things, an elastic quality so it will not crack when punched out. Great care must be taken so that it is put on in the right thickness, so many milligrams per four square inches. A circular piece of tin, four inches in area, is first weighed on delicate scales. It is then coated and weighed again to determine if the enamel is being put on at the proper thickness. So exacting is this enameling that a difference of three or four milligrams per four square inches spells the difference between the success or failure of the finished job. Since there are 28,349,527 milligrams in an ounce, it can readily be seen that the enamel thickness is figured very

closely.

After being enamel-coated and dried, the sheet is ready for the offset press. On the press, the sheet itself does not come in contact with the metal offset plate. Rather, the plate puts the impression on a rubber roller which transfers the ink to the tin sheet. In the case of bottle caps, several hundred are printed on one sheet which is later cut into strips and punched out. One or two colors are put on in one press operation and the sheet is also coated with a thin varnish or lacquer. The plate, after each printing, goes through 100-foot drying ovens, this time at 250°.

Special Inks Used

The inks used, like the enamel, are vastly different from ordinary inks. They must be baked dry and must possess marked adhesive qualities. In the case of food cans and bottle caps, the metal decorating must be able to withstand a

terrific processing—sometimes being in boiling water for as long as three hours and under 250 degrees of steam pressure—and still come out with all its original gloss and color and still stick tightly to the caps and cans.

The printed and dried sheets are put through a machine that sprays them with a thin coating of refined paraffin wax which lubricates the sheets so that they will slide more easily into position in the punch-press operation which follows.

Metal decorating may be a far cry from snapshooting, but it's just as much a part of photography as that picture of Aunt Minnie on the mantel.

Camera Club Books Harris

Percy Harris, president of the Royal Photographic Society of England, will address members and guests of the Kodak Camera Club at their spring exhibition to be held in Kodak Office Auditorium May 20. He is expected to discuss modern aspects of pictorial photography.

The exhibition will open at 7:15 with a viewing of prints, presentation of prizes and awards, and the showing of Kodachrome slides. A preliminary judging of both slides and prints will be conducted in Bldg. 28, KP, on Monday, May 17. The deadline for submitting entries is 5 p.m. on that date.

H-E Makes New Hanger

The Kodak Adjustable Developing Hanger, designed for processing Kodak Photofluor Film and Kodak Cardiograph Papers, has been announced by the Company.

The hanger can be adjusted to hold either film or paper in widths from 35 mm. to 70 mm. and fits into the standard 14x17-inch tank. Sliding clips on both the top and bottom bars hold the ends of the film or paper, permitting the processing of any length up to 11 feet.

Entirely new in design, it is expected that the new hanger, developed and manufactured at Hawk-Eye Works, will have a wide application in both the industrial and medical fields, where radiographic and electrocardiographic film and paper are processed in quantity.

Headed for Mill—This scrap metal from Kodak Park is being loaded on railroad cars for shipment to steel mills where it is vitally needed. This is the first scrap to be shipped since Kodak joined the nationwide drive. The EK campaign, headed by C. H. Vayo, has netted a total of 1,400,000 pounds thus far from Rochester as well as Tennessee Eastman.

Local Church Uses Movies

Movies have been integrated into the regular Sunday service of the Summerville Presbyterian Church. The nontheatrical film series, "Two Thousand Years Ago," has been shown on recent Sundays.

This particular series of films, made by J. Arthur Rank, England's cinemogul and leading producer of religious films, treats life at home, at school and at work, and traveling conditions in the time of Christ.

The visual audio committee at the church, consisting in part of Lloyd Reber, KO, and his wife; Went Crouch, KO; Al Newman, KP, and the wife of Rudy Damschroder, KP, was instrumental in planning the series.

KP Safety Film Wins Recognition

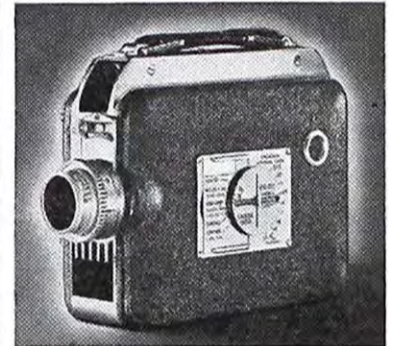

A Kodak-produced movie—"Kodak Park Safety"—has received honorable mention recognition for its contribution to safety in 1947, the National Safety Council announces.

The film was produced for the Safety Dept. at Kodak Park under the direction of Allen L. Cobb, KP safety head, by the Informational Films Div. Technical supervision was by J. Henry Parker, and the photography by Lloyd Reber.

Kodakwiz

ANSWER

(Question on Page 2)

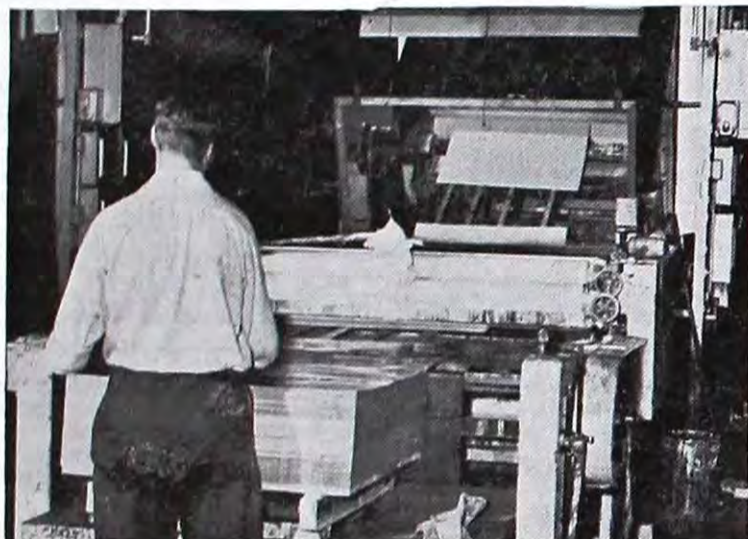

This is a Cine-Kodak Magazine 8 Camera, versatile in making home movies in either black and white or color.

KODAKERY

Vol. 6, No. 19 May 13, 1948

T. M. Reg. U. S. Pat. Office
Published weekly at Rochester, N. Y.,
with offices at 343 State Street
and printed at Kodak Park.

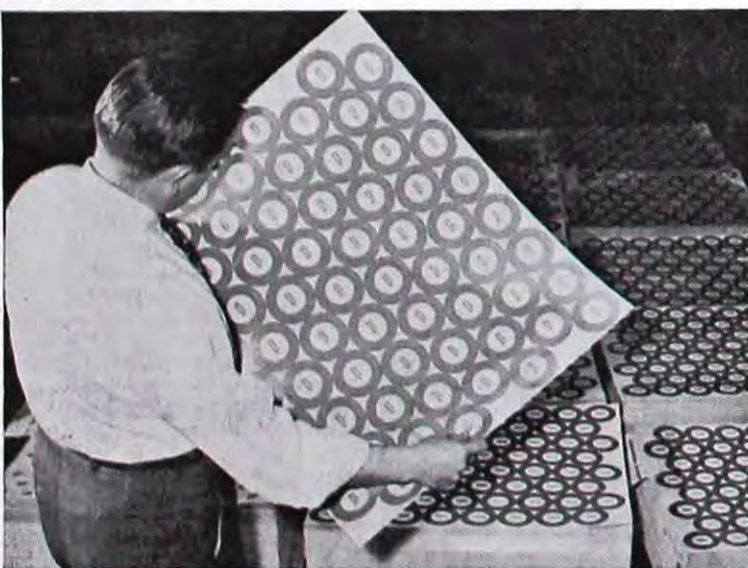

EDITOR - - - BOB LAWRENCE
Associate editors—Art Wood, Wilmer A. Brown, Division editors—Ike Shynook, Kodak Park; Sidney P. Hines, Camera Works; John Connell, Hawk-Eye; Kaye M. Lechleitner, Kodak Office. Out-of-Rochester editor—Dorothy E. Craig. Staff photographers—Norman Zempel, Jim Park.

Coating—Here the metal sheets, soon to be decorated, are given an undercoating of enamel. The man feeding the sheets inspects them at the same time by means of a mirror before they go into drying oven.

Through Again—Already having two colors printed on them, these metal sheets are about to go through the press for still another printing.

Can Lids—These eventually will be lids for canned meat products. After printing, they'll be cut apart and punched out on a punch press. Bottle caps are printed in the same way.

Look applauds...

RALPH STARR BUTLER

His recent retirement has deprived American business of one of the outstanding pioneers in modern advertising. But he leaves behind him a tradition that won him two awards in 1947 alone. His legacy includes a roster of alumni who today hold many of the profession's key posts.

With General Foods for 22 years, he chalked up such firsts as comic strips for ads and the first full-hour, nationally sponsored radio show. He also backed the historic broadcasts from Little America in 1932. Before that, he had blazed advertising trails for U. S. Rubber. And he had started the first college course in marketing. His hobbies—music and sailing—can still claim little of his time. He's too busy on a history of G.F. Friends also hope for a book on his own fascinating story.

DR. C. E. KENNETH MEES

He's doing for modern photography what Daguerre did for the primitive camera. In charge of Eastman Kodak's research since 1912, he has directed advances benefiting everyone from the family snapshot artist to the astronomer tracing pin-point stars. Improved panchromatic plates, home movies and color photography are just a sample. His department's research has also turned up discoveries useful to medicine and applied chemistry.

Dr. Mees began delving into photography's secrets while still a lad in his native England. For his D.Sc. he did a study on photography that became a classic. He has since added enough other books and papers to make a library. At 66, he's now on the scent of better and cheaper color pictures. It's progress, he believes, that makes the world go 'round.

(LOOK magazine, which recently saluted Thomas J. Hargrave, Kodak president, this week gave recognition to Dr. C. E. Kenneth Mees, Kodak vice-president in charge of research and development. "LOOK Applauds" is a regular feature of the magazine, "devoted to giving recognition to outstanding personages, whose distinguished contributions to knowledge, culture and the improvement of human relations merit special consideration.")

Gold Rush ... of '48

All That Glitters Is GOLD — The latest in footwear, headgear, purses and belts is gold. 'Tis said to be appropriate for all occasions. Combined with white, it makes for a rich-looking outfit, as shown by Virginia Zimmerman of Sales Service, KO. All accessories, the dotted jersey blouse in black and aqua and swish light wool gabardine suit with flare jacket and straight skirt are from Edwards.

"Gold is where you find it!"

Pioneers found it 100 years ago in California, and now American women are finding it everywhere . . . on their feet, around their waists, over their shoulders, in their hands and on their heads.

From those who are just back from Florida the common comment is "Why, they're all wearing GOLD!" ("All" refers to the fair sex there.) For street wear, dress wear and evening wear, it appears anytime.

No More Tarnish

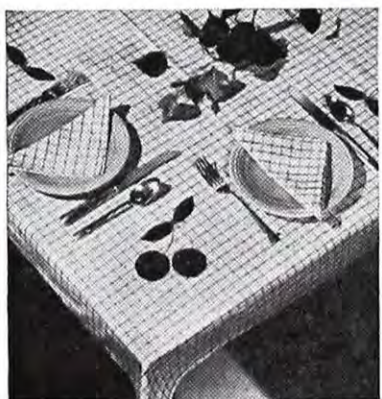

Today's gold in fabrics and accessories is different from that of several years ago too. Then, it was necessary to wrap it in black tissue paper to preserve the original glow from tarnish. The advance of science, however, eliminates this precaution.

Eastman Kodak is partially responsible for the woven metallic articles, in that EK and Aluminum Company of America have cooperated with the Dobeckmun Company of Cleveland in the manufacture of Lurex, as the new metallic yarn is called.

Kodapak Used

It consists of fine aluminum foil sandwiched between two sheets of Kodapak, the three layers being joined together with transparent adhesive. The adhesive, tinted, gives you gold. It is cut in widths of 1/80 of an inch and wider and is supplied to textile manufacturers.

Make 'em Yourself

Little hand touches, so easy to do, make a vast difference in your table linen. Here is a checked luncheon cloth with appliqued scarlet cherries and green leaves at each corner. Embroidery completes the colorful pattern.

The cloth and napkin set would make an attractive gift too. Obtain free directions from your KODAKERY Office.

Doug Finds Necktie Artistry Easy

The modern necktie causes spots before the eyes of the beholder, and not only spots but curlicues. One of the worst offenders in perpetuating the use of these odd geometric patterns is Hawk-Eye's Doug Bly, Final Inspection Dept.

He readily confesses that a favorite hobby is that of painting zig-zags and corkscrew-like doodlings on monochrome neckwear.

It's fun though, he tells, especially on a rainy afternoon or free evening. Besides being fun, painting cravats is easy, inexpensive too. Of this he convinced himself when he chose "It's Easy to Paint a Necktie!" as topic for a talk.

A Persuasive Speech

When he delivered the speech, Doug had never tried the art himself, but literally talked himself into it.

Painting a tie is not limited to men only. Girls, imagine how surprised some male member of your family would be to receive one of these prizes with a personal touch!

Entire equipment amounts to approximately \$1.50. It includes a tie of one color and small tubes of paint in colors which will be used. A large tube of white is essential too, because with it pastel colors are made.

A dish will do for a pallet; however, Doug puts his paint dabs on an irregular-shaped piece of beaver board which need not be

Douglas Bly

washed. Other materials are a bottle of permanent mixture (it may be purchased in any art shop), turpentine, desk-size blotter and two ordinary camel's hair brushes, one for fine lines and a larger brush for more sweeping strokes. Wash or dry-clean to remove filler. The filler causes the paint to spread.

Cut blotter to fit inside tie. Pull tie material tight over blotter and secure with Scotch tape.

Practice desired design on piece of paper, or, as Doug would do, sit back and look at the cloth un-

til joggly streamers, dots and dashes appear before your eyes. He warns the beginner to avoid fine lines and intricate designs.

Squeeze out small amount of colors onto blotter, which soaks up excessive oil in paint. Transfer to dish-pallet.

Fill two glasses, one with permanent mixture and the other with turpentine.

How to Do It

Now you're ready to begin! Brush first must be dipped into permanent mixture, which wets it and helps make the color fast.

Run brush across a piece of cleansing tissue or blotter to remove excessive liquid.

Roll brush in color to be used and paint just a little at a time. Because colors must adhere to fibers in the tie, do not paint one on another. If a mistake is made, change your design. "I think I've done this every time," the H-E man admits.

Before changing colors rinse brush thoroughly in turpentine.

When the product is completed, the artistry admired, hang tie, still with blotter insert, in closet or other dark corner where sunlight and dust cannot reach it.

A drying period of three days or more is required. Masterpiece now may be pressed with cloth soaked in vinegar. It "fixes" color in material.

Before removing blotter, let tie air for a day. It now is ready to be worn, sufficient courage and nerve prevailing.

When putting away brushes, dip in turpentine.

A good idea for an added attraction on your tie, he told, is to repeat the major design on a smaller scale at the point where the knot will come, about 14 inches from the end. Here's another helpful hint. Do not attempt to paint a picture on the first one you do. Doug has colored half a dozen, but still hasn't tried this feat.

As an encouraging note to those who have the urge to paint a tie, he said his first was his best.

Alert Correspondents Cause Scotch Lassies' Introduction

Gals from Glasgow

Katie Quinn, left, and Kitty Robertson were unknown to each other until they met by chance at Kodak.

A girl from Glasgow named Katie has met a girl from Glasgow named Kitty—through KODAKERY. The meeting occurred because KODAKERY Correspondents Beryl Guthrie, KO Stenographic, and Hallie Neward, KO Credit, sent notes to this paper's office that their departments were boasting of Scotch lassies.

Interviews and the introduction of Katie Quinn and Kitty Robertson followed.

Lives with Relatives

Katie, of Stenographic, first arrived in the States last November, but illness at home forced her to return in three weeks' time. Less than a month ago, the SS America docked in New York with Katie aboard. Now, she's living with her uncle, Scotty Donaldson, KP, and family, including son Fred, KP.

During the war, Katie was secretary to a company of locomotive engineers in Glasgow.

Golf and the theater are two of her big outside interests. Golf, the game invented and given by the Scots to the world, has been greatly curtailed in its homeland because of the scarcity of golfballs, she declared.

She enjoys being backstage, acting as stage manager and producer, and worked with the Glasgow Unity Theater Group before it turned professional and took a play to London's famed West End Theater District.

Old Friends Meet

Kitty Robertson and her mother came to Rochester last June to visit Alec Young and his wife, friends they hadn't seen since the Youngs left Scotland more than 20 years ago. Kitty's mother spent the summer here, then returned to Glasgow. Kitty became a bookkeeper at a local bank for she had been a ledger clerk for the Commercial Bank of Scotland for six years. Since she replaced a man in this job, she was not called to service.

Now, she's enjoying her work in KO Credit, for nowhere, she says, has she met more friendly, helpful girls. "I feel as if I had known them for ages."

They both laugh about their accents and say they take a kidding on the long "o" sounds they give to such words as cook and book.

They both hope to go home to Scotland sometime, but only to visit. Even in such a short time, they say, they know this is where they want to live.

Found to be an excellent chocolate cupcake recipe is the following, a favorite of Martha Lee Barmes, Camera Works dietitian.

She has used it for years; claims the mallow mint sauce gives a finished touch to the chocolate treat. The combo of sauce and cakes is called:

SNOW PEAKS

1/2 c. milk
2 sq. chocolate
3 T. shortening
1/2 c. sugar

Martha Lee Barmes

1/2 c. flour
1 egg
1/2 t. salt
1 t. baking powder
1/2 t. vanilla

Heat milk over hot water. Add chocolate broken into pieces. Cook until thick. Stir to keep smooth. Then blend shortening with sugar and egg. To this add chocolate mixture, then sifted dry ingredients. Blend well. Add vanilla.

Pour into 6 greased molds or custard cups. Bake in moderate oven (350 degrees F.) about 20 minutes. Serve warm with:

MALLOW MINT SAUCE

1/2 c. sugar
1/3 c. water
1/8 t. cream of tartar
8 marshmallows
Few drops peppermint or crushed mint candies

Mix sugar, water and cream of tartar. Boil 3 minutes. Cut marshmallows into pieces. Stir into hot syrup. Add peppermint flavoring or crushed mints.

The Market Place

KODAKERY ads are accepted on a first-come, first-served basis. Department correspondents in each Kodak Division are supplied with ad blanks which, when your ad is typed or printed on them in 25 words or less, are put in the Company mail addressed to "KODAKERY," or handed in to your plant editor. All ads should be received by KODAKERY before 10 a.m., Tuesday, of the week preceding issue. HOME PHONE NUMBERS OR ADDRESSES MUST BE USED IN ADS. KODAKERY reserves the right to refuse ads and limit the number of words used. Suggested types are: FOR SALE, FOR RENT, WANTED, WANTED TO RENT, LOST AND FOUND, SWAPS, KODAKERY READERS ARE ASKED TO PLACE ADS ONLY FOR THEMSELVES AND HOUSEHOLD—NOT FOR FRIENDS OR RELATIVES. TO DO THIS IS TO DENY SPACE TO THE PEOPLE OF KODAK FOR WHOM THIS SPACE IS RESERVED.

The two KP girls are among the nearly 80 KPAA feminine fairway fans taking lessons from the Genesee pro.

H-E Intraplant, KP Twilight Leagues Launch Play Monday

The HEAA Intraplant Softball League gets under way next Monday evening at Seneca Park. The opening game promises to be one of the best of the season, pitting last year's flag winners, the Estimators, against Dept. 42, champs in 1946 and 1947 finalist.

4 Enter Net Loop

Four teams have entered the newly-formed KPAA Intraplant Tennis League, and it is hoped four more will be in the fold by May 24, the tentative opening date.

Teams entered, and their captains: Color Control, Hank Brauner; Bldg. 14, John Elwell; Physical Testing, Jack Englert; Syn. Chem., Jim Van Allan.

The league season will comprise 45 games with each of the 10 teams in the loop playing a 10-game schedule. The plant championship and Elmer G. Quin trophy will go to the Shaughnessy System playoff winners between the top four teams in the final standings.

16 IN KP LEAGUE

One game in each division will mark the season's inaugural in the KPAA Twilight Softball League Monday, May 17. Sixteen teams will compete in the American and National divisions.

All games will be played at 5:30 p.m. on the Lake Avenue, DPI and School No. 41 diamonds.

National Division

May 17—Fin. Film-Ship. vs. Recovery, Lake.
May 18—Syn. Chem. vs. Bldg. 30, Lake.
May 19—F.D. 10-Roll Ctg. vs. Org. Ridge, Lake.
May 20—Eng.-Draft. vs. Emul. Mlt., Lake.

American Division

May 17—Research vs. Sensitometry, DPI.
May 19—Printing vs. Emcos, School No. 41.
May 20—Kodacolor vs. Cafeteria, School No. 41.
May 21—Paper Ser. vs. Phys. Test., Lake.

Noon Opener Rained Out

Rain forced cancellation of the traditional opening day ceremonies in the KPAA Noon-Hour Softball League last Monday.

Four teams will again compete in the circuit, with Jack Connolly's Yankees defending their 1947 title. Other clubs, and their managers: Birds, Al Tinsmon; Giants, Jim Gallagher; Dodgers, Mike Farrell.

The week's schedule:

May 13—Birds vs. Yankees
May 14—Giants vs. Dodgers
May 17—Dodgers vs. Birds
May 18—Yankees vs. Giants
May 20—Dodgers vs. Yankees

Umpires for all league games which are played during the noon hour on the Lake Avenue diamond, are Ned Bauer, Gordon Steinfeldt and Lloyd Javet.

Kaypees Seek 12th Pennant As Majors Launch 13th Season

With another Rochester Major Industrial Softball League season under way, Kodak Park is gunning for its fifth straight pennant and its 12th in the 13-year history of the circuit. The league, which was to have started play this week, has discarded the split season setup and will play through the regular schedule with the four top teams at the end of the campaign entering the Shaughnessy playoffs.

Doubleheaders are scheduled nightly Monday through Friday at Kodak Park's Lake Avenue ball yard, with postponed contests to be run off Saturday nights. The weatherman lost no time lining up the Saturday sessions, rain and cold last Monday necessitating postponement of the scheduled curtain-raiser involving Kodak Park and Balco.

H-E Won in '43

A glance at the Major League records reveals just how Kodak has dominated play. The only year the Kaypees failed to nail down the pennant since the league's inception in 1936, Hawk-Eye copped the championship. That was in 1943 when Charlie Beckman's outfit beat out Ritters in the playoff finals. Of that H-E club, Corky Schwind and Al DeHond are still pastiming for the lensmen.

The list of Major League champions and their managers to date:

1936—Kodak Park, Joe Minella
1937—Kodak Park, Joe Minella
1938—Kodak Park, Joe Minella
1939—Kodak Park, Joe Minella
1940—Kodak Park, Joe Minella
1941—Kodak Park, Joe Minella
1942—Kodak Park, "Shifty" Gears
1943—Hawk-Eye, Charlie Beckman
1944—Kodak Park, Jim Gallagher
1945—Kodak Park, Jim Gallagher
1946—Kodak Park, Jim Gallagher
1947—Kodak Park, Jim Gallagher

Jack Shatzel has succeeded Jerry Fess as manager of the Camera Works nine. Fess, who piloted the Cameras to third place in the Major League in his first season as manager last year, was forced to retire prior to the season's opener due to illness in his family.

The Major Industrial League schedule for the next week:

Friday, May 14—8 p.m., Products vs. Gleason; 9 p.m.—CAMERA WORKS vs. Ritters.

Monday, May 17—8 p.m., Bausch & Lomb vs. Grafex; 9 p.m., Products vs. Wollensak.

Tuesday, May 18—8 p.m., Gleason vs. Ritters; 9 p.m., KODAK PARK vs. Delco.

Wednesday, May 19—8 p.m., HAWK-EYE vs. CAMERA WORKS; 9 p.m., Wollensak vs. Bausch & Lomb.

Thursday, May 20—8 p.m., Products vs. Ritters; 9 p.m., Gleason vs. KODAK PARK.

League officers this season include, in addition to Mert Fahy, CW, commissioner, Cap Carroll, H-E, and Joe Minella, KP. Cap is secretary, while Joe is serving as treasurer.

Sports Roundup

Wren, Wagner Win Pin Title; 3 EK Teams in 'Shoe Loop

A 1332 handicap total posted May 3 by Art Wren and Gordon Wagner, Kodak Park keglers, withstood the final week's furious firing and won first place in the annual city tournament. Wagner crayoned a scratch series of 230, 204, 217—651, with Wren tossing a 576 on games of 202, 196 and 178. This gave the Kaypee duo a 1227 scratch total, to which they added 105 free pins.

So we missed a few names in last week's list of bowling leaders for the 1947-48 season! Well, here's the complete honor roll—we think. Omissions should be reported this week. The following list includes the top scores posted by Kodak keglers bowling with EK teams during regular-season competition:

MEN'S LEAGUES

Season's High Individual Singles
Lloyd Boyle, H-E Brass Butchers... 299
Frank Kesel, KPAA Fri. B-8... 286
Ray Blaesi, CW No. 1... 279
Dan King, KPAA Thurs. B... 277
George Houser, CW No. 1... 277
Mert Fahy, CW Supervisors... 276

Season's High Individual Series
Jim Weigand, KPAA Thurs A... 682
Bill Statler, KO American... 681
Charles Nichols, CW Supervisors... 671
Bernie Rausch, KO National... 657
Walt Szymula, CW Saturday... 656
Ernest Kubanka, CW No. 1... 656
Lloyd Boyle, H-E Brass Butchers... 645

WOMEN'S LEAGUES

Season's High Individual Singles
Madeline Lamb, KP Dusties... 264
Marge Sale, KPAA 16-Team... 235
Dorothy Hughes, CW Wed. Girls... 233
Alma Bittner, KPAA 16-Team... 231
Marion Ellis, KPAA 16-Team... 231
Lois Tuttle, KPAA 16-Team... 230

CW's Bob Keegan gained his first International League victory of the season last Thursday as Newark beat Montreal, 5-3. Keegan, who gave up only five hits in six innings, was relieved in the seventh despite the fact that he survived a sixth-inning Royals' rally.

Fourteen-year-old Patricia Lesser, daughter of Col. L. L. Lesser of the EK Store in Seattle, is creating quite a sensation in Seattle links circles. She recently broke a 20-year record at the Jackson public course, touring the 18-hole layout in 33-37—70. Patricia, who consistently shoots in the upper 70s, holds two other course records in Seattle.

Gordie Van Duser, KP, is starting his 10th season as batting prac-

Rolls 700 Series — Elmer Eckert, shown above checking his score-sheet, recently rolled a 700 scratch series in city tournament singles competition. The H-E keglers, whose hefty three-game total included a 278 game, won the 1948 Monroe County pin tourney.

tice pitcher for the Rochester Red Wings. With the exception of the two years he spent in the Army, Gordie has voluntarily handled the job for the local International League club every season since Ray Blades' regime. For many years Van Duser played semi-pro ball in and around Rochester.

A horseshoe league is planned at Kodak Park for the 1948 season, according to "Shifty" Gears of the KPAA Office. Departments interested in entering teams, as well as individuals desirous of tossing shoes in the new circuit, are urged to contact Harold Freer, Ext. 414, KP.

Ruth Frank, KO athlete, is managing the Russer girls' softball team this season. A catcher, Ruth has been with the TNT's the past several seasons.

Kodak Park, Hawk-Eye and Camera Works have entered teams in the 1948 Industrial Horseshoe League race. Starting Monday, May 17, matches will be run off four nights weekly at the Edgerton Park courts, according to Johnny Doyle, CWRC director, who heads the league this year.

Kodak West Tilt Delayed

Like all other activities scheduled for May 10, the Kodak West Noon-Hour Softball League inaugural was spoiled by ol' Jupe Pluvius.

George Kelch's Field Division 5 outfit was scheduled to cross bats with Jim Moyer's Renegades. A newcomer to the loop, the latter outfit replaces Bldg. 204.

Other clubs in the circuit are Wood Cellulose, managed by "Tea" Rosati and Synthetic Chemistry, piloted by Howard Monroe.

Officers this season are George Izard, league president, and Joe Baier, vice-president.

City Champs — Gordon Wagner, left, and Art Wren, KPAA Thursday A League keglers, won the city tournament doubles championship with a 1332 total. Wagner rolled a scratch series of 651, including a 230 game, while Wren posted 576. The Kaypee keglers added a 105-pin handicap to their 1227 scratch score.
