

The successful GEMINI Space Rendezvous.
Photographed on KODAK EKTACHROME MS Film, SO-368.

EKTACHROME Film:

from outer space to ocean floor

There's a KODAK EKTACHROME Film for just about every variety of photographer and camera there is. Because EKTACHROME Film is photography's most complete family of color films.

**A small part of the
KODAK EKTACHROME
Film family:**

KODAK EKTACHROME Film — sheet sizes, Daylight — ASA 50; Type B — ASA 32, balanced for exposure with 3200 K lamps. Sheet films for reversal processing to produce positive color transparencies.

KODAK EKTACHROME-X Film — roll sizes, Daylight—ASA 64. A well-qualified film for professional demands. Has stable latent image, good reciprocity characteristics.

KODAK High Speed EKTACHROME Film — 120 and 135 rolls, Daylight—ASA 160, Type B—ASA 125. Good for fast action, daylit interiors, and close-ups that require maximum depth of field.

We regularly stock these films, and we can easily order the other more specialized members of the EKTACHROME Film family.
